The global EAS Bottle Security Tag market size is predicted to grow from US\$ 363 million in 2025 to US\$ 511 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

An EAS Bottle Security Tag is a dedicated anti-theft component based on Electronic Article Surveillance technology, specially designed for sealing and protecting bottled goods in retail scenarios. It consists of a mechanical locking structure, an EAS induction coil/chip, and a durable plastic or metal shell, which can be firmly fixed on the bottle neck, cap or body. When passing through the store's EAS antenna system without legitimate unlocking or deactivation, it will trigger an audible and visual alarm, so as to realize physical anti-dismantling and electronic anti-theft dual protection, and is widely used in the loss prevention of high-value bottled products.

In 2025, global EAS Bottle Security Tag production reached approximately 1,237 million units, with an average global market price of around US\$ 0.3 per unit. The production capacity of EAS Bottle Security Tag is approximately 1,565 million units per year, the average gross profit margin was 28-31%.

The upstream supply chain of EAS Bottle Security Tags covers suppliers of raw materials such as engineering plastics, steel wire ropes, magnetic materials and conductive coils, as well as manufacturers of core electronic chips, injection molding equipment and automatic assembly machines. Downstream, the products are mainly supplied to retail security solution integrators, retail chain enterprises, supermarkets, liquor stores and source tagging service providers, and are matched with EAS antennas, unlocking detachers and other supporting equipment to form a complete retail loss prevention system for terminal application.

The cost of EAS Bottle Security Tags is dominated by raw material costs, accounting for about 45%?55% of the total cost, mainly including plastic shells, metal lock catches, induction coils and EAS chips. Manufacturing and processing costs account for 25%?30%, covering injection molding, assembly, testing and packaging links. R&D, logistics, warehousing and quality management costs account for the remaining 10%?15%, and the unit cost will be significantly reduced with the expansion of production scale.
