The global Easy-Laser market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The Easy-Laser is a device that uses a laser to perform centering and leveling measurements.

It measures shaft misalignment by irradiating a laser beam onto the rotary axes of connected rotating equipment. Adjustments can be made while checking the parallelism and perpendicularity of equipment and parts. Misalignment in the connection of rotating shafts can distort the shafts and load on the equipment, resulting in malfunctions. Using an Easy-Laser to measure and check the shafts will prolong the life of the equipment. It also improves the efficiency of maintenance and inspection work, thereby reducing costs.

United States market for Easy-Laser is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
