Abstracts

The global EB Curable Ink market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

EB curable inks are formulated as a safe, cost-efficient, durable, and reliable alternative to UV-curable and LED-curable inks. Rather than curing a liquid until it becomes a solid, electron beam (EB) ink technology actually changes the chemical composition of the ink.

The industry trend for EB Curable Ink is driven by a growing demand for sustainable and efficient printing solutions. As environmental concerns and regulatory pressures increase, EB Curable Inks are gaining popularity due to their minimal emission of volatile organic compounds (VOCs) and hazardous air pollutants. This trend involves innovations in ink formulations to further enhance curing efficiency and adhesion properties. Additionally, there is a focus on expanding the use of EB curing technology in various printing applications, including flexible packaging, labels, and commercial printing, as it offers benefits such as reduced energy consumption and improved print quality, contributing to the overall sustainability of the printing industry.
