Abstracts

The global EBER Probe market size is predicted to grow from US$ 102 million in 2025 to US$ 167 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

EBER probes are nucleic acid probes used for in situ hybridization (ISH) to detect Epstein-Barr virus (EBV)-encoding small RNAs (EBER1/2). They are commonly used in FFPE tissue sections for nucleus staining/fluorescence localization, aiding in the determination of latent EBV infection and related tumor subtyping.

Upstream: Oligonucleotide/probe design and synthesis, labeling (DIG/biotin/fluorescence), enzymes and buffers, slides and mounting materials. Downstream: Hospital pathology departments and third-party testing, tumor/lymphoma and nasopharyngeal carcinoma diagnosis, transplant follow-up, and research institutions.

In 2025, the global unit price of EBER probes was $619, with sales of 169,000 units and a global annual production capacity of 180,000 units. The industry profit margin was 25-30%.

Global Market Trends:

Clinical demand for refined subtyping of EBV-related diseases is increasing. EBER-ISH, due to its ability to locate infected cells at the tissue level, will remain a key detection method; its penetration rate continues to increase in the management of lymphoma, nasopharyngeal carcinoma, and immunosuppression-related diseases.

Platforms are accelerating automation and standardization: More laboratories are adopting ready-to-use probes and reagents compatible with mainstream fully automated

IHC/ISH platforms, improving throughput, repeatability, and turnaround time, driving growth in demand for related consumables and service-oriented testing.

Technology is evolving towards the integration of multiplex RNA-ISH and digital pathology: Achieving spatial resolution of multiple targets/combined IHC on the same slide, coupled with high-resolution imaging and algorithmic quantification, will promote companion diagnostics and remote consultations; simultaneously, influenced by stricter IVD compliance and quality control requirements, manufacturers will place greater emphasis on sensitivity, specificity, and batch-to-batch consistency.
