The global Eccentric Eddy Current Separator market size is predicted to grow from US\$ 74.61 million in 2025 to US\$ 108 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Eccentric Eddy Current Separator is a highly efficient separation device for separating non-ferromagnetic metals and non-metallic materials. Through the eddy currents and magnetic field forces generated by the eccentrically arranged rotor, the device can effectively separate conductive materials such as aluminum and copper from waste or mixtures. Its design reduces the interference of ferromagnetic materials on the separation efficiency through the eccentric magnetic field layout, and has higher separation accuracy and stability. This separator is widely used in waste recycling, resource reuse and mining processing, and is particularly suitable for processing small non-ferrous metal particles in complex mixtures.

United States market for Eccentric Eddy Current Separator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
