The global Eco Epoxy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Eco epoxy are environmentally friendly epoxy resin systems that have lower VOC (volatile organic compound) content than traditional epoxy resins and contain a large amount of bio-based ingredients such as vegetable oils, thereby reducing dependence on petroleum-based chemicals. The production of eco-epoxies generally follows more environmentally friendly practices, focusing on reducing waste and energy consumption, and using renewable resources whenever possible, which is less harmful to the environment. These environmentally friendly resins are used in a variety of applications such as woodworking, flooring, crafts and artwork, which require a strong, durable, and beautiful surface but with less impact on the environment.
