Alkyd resins based on vegetable oil have been proven to be superior to other resins in many special areas because of its low cost, inherent biodegradability and excellent mechanical and durability characteristic. Alkyds are used in paints, varnishes and in moulds for casting. They are the dominant resin or binder in most commercial oil-based coatings. Approximately 200,000 tons of alkyd resins are produced each year. The original alkyds were compounds of glycerol and phthalic acid sold under the name Glyptal.
