They are typically made from biodegradable, recyclable, or reusable materials such as PLA (polylactic acid), PHA (polyhydroxyalkanoate), paper-based composites, and bio-based plastics. These bags are designed to replace traditional plastic bags, reducing microplastic pollution, carbon emissions, and landfill pressure. They not only meet food safety standards but can also be naturally decomposed or recycled under certain conditions. They are widely used in catering, retail, takeout, supermarkets, and other settings. With stricter global environmental regulations and rising consumer awareness, eco-friendly food bags are becoming a key component of green packaging.
