The global Eco-friendly Lyocell Fiber market size is predicted to grow from US\$ 998 million in 2025 to US\$ 1795 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

Eco-friendly lyocell fiber derived from cellulose, is known as a man-made fiber. It is popularly known by the brand name Tencel. Lyocell, a type of rayon fiber, is manufactured in a closed-loop method through a solvent spinning technique, wherein the cellulose undergoes a limited chemical change. Lyocell fibers are widely used in the textile industry in a broad range of apparels and home textiles. These fibers are also used in the medical industry in the production of medical equipment and surgical products.

With increasing environmental awareness, both consumers and manufacturers are seeking sustainable alternatives to conventional fibers like cotton and polyester. Eco-friendly lyocell fiber is seen as an eco-friendly solution because of its production process, which uses closed-loop technology that recycles water and solvents, reducing waste and pollution. Unlike synthetic fibers such as polyester, eco-friendly lyocell fiber is biodegradable, aligning with the growing demand for materials that minimize environmental impact at the end of their life cycle. This makes it appealing to brands focusing on circular economy models.

Moreover, eco-friendly lyocell fiber's adoption in diverse applications are increasing. Eco-friendly lyocell fiber's versatility allows it to be used in a variety of textiles, from casual wear to high-end fashion. It blends well with other fibers such as cotton, wool, and silk, expanding its application in various fabric compositions. In addition, the fiber's breathability, moisture control, and softness have made it popular in bedding,

upholstery, and other home textiles.
