Abstracts

The global ECoG Electrodes market size is predicted to grow from US\$ 441 million in 2025 to US\$ 1527 million in 2032; it is expected to grow at a CAGR of 18.9% from 2026 to 2032.

ECoG Electrodes are sensors used to record electrical activity directly from the surface of the brain (cerebral cortex). Unlike EEG, which measures signals through the scalp, ECoG electrodes are placed subdurally or epidurally, providing higher spatial and temporal resolution for neural signals. They are widely used in clinical monitoring (e.g., epilepsy) and research for brain-computer interfaces (BCIs). In 2025, global ECoG electrode production reached approximately 0.13 M units, with an average global market price of around US\$ 3,500 per unit. Annual production capacity is 0.14 M units. Gross Profit Margin: 32.35%. The ECoG electrode industry chain includes upstream raw materials, midstream manufacturing, and downstream applications. Upstream materials mainly consist of biocompatible metals like platinum and gold, as well as flexible polymers for electrode substrates. Midstream involves the design and production of grids, strips, and depth electrodes, integrating connectors, amplifiers, and acquisition systems. Downstream, these electrodes are applied in clinical fields such as epilepsy monitoring and neurosurgical planning, as well as in research and brain-computer interface development. ECoG electrodes occupy a unique position in neural interfacing, offering high spatial and temporal resolution between non-invasive EEG and invasive single-unit recordings. Their applications in clinical monitoring, BCI research, and functional cortical mapping make them highly valuable. Future growth depends on innovations in flexible, minimally invasive designs and scalable manufacturing, which could significantly expand adoption beyond specialized clinical and research settings.

United States market for ECoG Electrodes is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for ECoG Electrodes is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
