Ecological and environmental restoration services refer to the restoration and recovery of polluted or degraded natural environments through the application of various scientific and technological and engineering means to improve the health and function of ecosystems. These services include soil restoration, groundwater restoration, water body restoration and ecological restoration, etc., aiming to eliminate environmental pollution, restore ecological balance and promote sustainable development, and ultimately achieve the effective use of natural resources and environmental protection.

Ecological and environmental restoration services are an important means of dealing with environmental degradation and pollution. They not only solve existing environmental problems, but also lay the foundation for future sustainable development. With the strengthening of environmental regulations and the improvement of public environmental awareness, ecological and environmental restoration services have become more important. Through scientific restoration technologies and comprehensive management measures, these services can restore the natural functions of ecosystems, protect biodiversity, and improve the quality of human life. However, the successful implementation of these services requires interdisciplinary cooperation, technological innovation, and long-term investment. Only by continuously optimizing and improving restoration measures can we achieve true environmental restoration and sustainable development goals.
