An ECU scanner is a device that plugs into a vehicle's OBD-II port to access real-time diagnostic data and read trouble codes (DTCs) from the engine and other vehicle systems. OBD (On-Board Diagnostics) is an on-board self-diagnostic system used to monitor the vehicle's operating status and emission control. In traditional automobile fault diagnosis solutions, when an abnormality occurs in a car, the OBD system determines the specific fault based on a specific algorithm, stores it in the form of a code, and initiates emergency measures according to the degree of the fault, and reminds the owner through the fault light, asking the owner to drive the vehicle to the 4S shop for repair. The maintenance personnel connect the diagnostic instrument to the vehicle's OBD interface to read the fault code (DTCs) and related sensor data to detect and repair the fault.

United States market for ECU Scanner is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
