The global Edge AI Platforms Software market size is predicted to grow from US\$ 1243 million in 2025 to US\$ 2406 million in 2032; it is expected to grow at a CAGR of 10.1% from 2026 to 2032.

Edge AI platforms facilitate the deployment and management of artificial intelligence (AI) and machine learning (ML) models directly on edge devices. These devices, which include IoT sensors, mobile phones, embedded systems, and other hardware at the network's edge, process data locally without sending it to centralized cloud servers. Edge AI platforms provide tools and frameworks for developing AI models optimized for edge computing, deploying these models onto devices, and monitoring their performance in real time. Companies use these technologies to reduce latency, enhance data privacy, and enable real-time decision-making by processing data where it is generated. By performing AI computations on the edge, organizations can minimize bandwidth usage, reduce dependence on network connectivity, and improve the responsiveness of applications. This is particularly crucial in industries like manufacturing, healthcare, autonomous vehicles, and retail, where immediate insights and actions are essential.

For many years, edge computing has been considered the next frontier in cloud computing. As an extension of cloud computing technology and applications, its higher responsiveness and more decentralized infrastructure can support large-scale implementation in numerous industries, including smart manufacturing, autonomous driving, and artificial intelligence. Edge computing has been incorporated into the strategic planning systems of many countries around the world. Since 2020, major developed countries have begun planning for the development of edge computing technology industries. In the past two years, an increasing number of countries have

proposed strategic plans, recognizing edge computing as a cutting-edge area in information and communications technology. They have also introduced a series of national policies to promote and support in-depth exploration and steady implementation of edge computing.
