The global Edge Position Sensor market size is predicted to grow from US$ 677 million in 2025 to US$ 1016 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Edge position sensors combine usability and precise measurement for measuring web edges, object width or control, copy counting, gap or position detection.

The edge position sensor market has experienced steady growth due to the increasing demand for automation and position control applications in industries such as manufacturing, automotive, and robotics. The market is driven by factors such as the need for accurate and reliable position measurement, the pursuit of improved productivity and efficiency, and the integration of sensors in advanced control systems.

The edge position sensor market is served by various sensor manufacturers, technology providers, and system integrators. Some notable players in the market include Omron Corporation, Balluff, Sick AG, Keyence Corporation, Pepperl+Fuchs and among others. These companies offer a range of edge position sensor solutions tailored to specific industry requirements.

There is a trend towards miniaturization and integration of edge position sensors. Manufacturers are developing compact and lightweight sensors that can be easily integrated into smaller devices and systems. This trend is driven by the demand for

space-saving solutions, particularly in industries such as mobile devices, robotics, and automotive applications.

The demand for edge position sensors with higher resolution and accuracy is increasing. Industries such as semiconductor manufacturing, nanotechnology, and precision engineering require sensors that can provide precise and fine-grained position measurement. Manufacturers are developing sensors with improved resolution, reduced noise, and higher accuracy to meet these demanding requirements.

Non-contact edge position sensing technologies, such as optical and laser-based sensors, are gaining popularity. These sensors offer advantages such as high-speed measurement, non-intrusive sensing, and the ability to measure objects in motion. Non-contact sensors are preferred in applications where contact with the object being measured is not desirable or may cause wear and tear.

The integration of wireless connectivity and IoT capabilities into edge position sensors is an emerging trend. This allows for remote monitoring, real-time data transmission, and centralized control of position sensing systems. Wireless and IoT-enabled sensors offer increased flexibility, scalability, and ease of integration with existing IoT infrastructure.
