The global EDI (Electrodeionization) Modules market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electrodeionization (EDI systems) is a continuous, chemical-free water polishing process producing high purity water for industrial use. The EDI module consists of a set of chambers filled with ion exchange resins and separated by ion-exchange membranes. Water enters the module, where an applied electrical field at right-angles to the flow forces ions to move through the resins and across the membranes.
