The global Edoxaban Tosilate Orally Disintegrating Tablets market size is predicted to grow from US\$ 1982 million in 2025 to US\$ 4439 million in 2032; it is expected to grow at a CAGR of 12.4% from 2026 to 2032.

Edoxaban Tosilate Orally Disintegrating Tablets are a type of anticoagulant medication designed to prevent and treat conditions related to blood clots, such as deep vein thrombosis, pulmonary embolism, and stroke prevention in patients with non-valvular atrial fibrillation. The active ingredient, edoxaban, is a direct Factor Xa inhibitor, which works by interrupting the blood clotting cascade and reducing the risk of clot formation. These tablets are formulated to disintegrate quickly in the mouth without the need for water, making them particularly convenient for patients who have difficulty swallowing traditional tablets. This delivery method ensures ease of administration while maintaining therapeutic efficacy.

The market for Edoxaban Tosilate Orally Disintegrating Tablets is driven by the rising prevalence of thromboembolic disorders, such as deep vein thrombosis, pulmonary embolism, and stroke associated with atrial fibrillation. With increasing awareness of the importance of anticoagulation therapy and the growing geriatric population at higher risk of clotting disorders, demand for user-friendly and effective anticoagulant formulations has surged. Orally disintegrating tablets, offering enhanced patient compliance due to their convenience and ease of administration, particularly benefit individuals with swallowing difficulties. Market growth is further supported by advancements in drug delivery technologies and the expansion of healthcare access in emerging economies. However, challenges such as high treatment costs, potential bleeding risks, and competition from alternative anticoagulants may restrain growth. Regulatory approvals and strategic collaborations among pharmaceutical companies are expected to play a

key role in shaping the market's trajectory.
