Abstracts

The global Edoxaban Tosilate Tablets and Generic Drugs market size is predicted to grow from US$ 1902 million in 2025 to US$ 2655 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Edoxaban is a member of the Novel Oral Anti-Coagulants (NOACs) class of drugs, and is a rapidly acting, oral, selective factor Xa inhibitor. By inhibiting factor Xa, a key protein in the coagulation cascade, edoxaban prevents the stepwise amplification of protein factors needed to form blood clots. It is indicated to reduce the risk of stroke and systemic embolism (SE) in patients with nonvalvular atrial fibrillation (NVAF) and for the treatment of deep vein thrombosis (DVT) and pulmonary embolism (PE) following 5-10 days of initial therapy with a parenteral anticoagulant. Traditionally, warfarin, a vitamin K antagonist, was used for stroke prevention in these individuals but effective use of this drug is limited by it's delayed onset, narrow therapeutic window, need for regular monitoring and INR testing, and numerous drug-drug and drug-food interactions. This has prompted enthusiasm for newer agents such as dabigatran, apixaban, and rivaroxaban for effective clot prevention. In addition to once daily dosing, the benefits over warfarin also include significant reductions in hemorrhagic stroke and GI bleeding, and improved compliance, which is beneficial as many patients will be on lifelong therapy.
