The global Education Facilities Management Software market size is predicted to grow from US$ 1612 million in 2025 to US$ 2758 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Education Facilities Management Software is a professional digital management platform designed specifically for K-12 schools, higher education institutions, vocational schools, and educational training institutions. Based on technologies such as the Internet of Things (IoT), mobile internet, data visualization, and full asset lifecycle management, it integrates the physical facilities (such as teaching buildings, laboratories, and venues), teaching equipment (such as teaching aids, research instruments, and multimedia equipment), space resources (such as classrooms, meeting rooms, and dormitories), and operation and maintenance services (such as repair, cleaning, and energy consumption) of educational institutions. This enables standardized, visualized, and intelligent management of the entire lifecycle of educational facilities, from planning and construction to use, maintenance, and disposal. It addresses pain points such as low facility operation and maintenance efficiency, idle space resources, lack of asset supervision, and high compliance risks. It ensures the continuity of teaching activities and research work, optimizes the allocation of educational resources, reduces operating costs, and provides data support for decisions regarding facility upgrades and space planning.

K-12 schools and higher education institutions generally face challenges such as aging facilities, insufficient maintenance budgets, staff shortages, increased campus security requirements, and the increasing complexity of asset management across multiple campuses. Therefore, they have a greater need for software-based solutions to achieve closed-loop repair requests, preventative maintenance, mobile inspections, and budget

prioritization. Cloud deployment has become mainstream, with mobile work orders, QR code asset management, digital campus maps, real-time dashboards, and supplier collaboration improving response speed. AI and IoT are being used to predict equipment failures, identify high-energy-consuming areas, optimize HVAC operations, and automatically generate maintenance plans. Higher education settings focus more on space utilization, laboratory safety, energy and carbon emissions, and capital project management; K-12 settings focus more on building safety, compliance inspections, cleaning services, traffic management, and the repair experience for parents and teachers.
