Pharmaceutical products can be administered in different forms of delivery such as nasal, oral, topical, or injectable. A study found that swallowing tablets was often difficult, especially for the very young or very old. To overcome this critical health issue, pharmaceutical companies have turned to user-friendly alternatives such as chewable tablets, lozenges, orally disintegrating granules, and effervescent tablets. These formulations are more convenient, improve accessibility, extend the company product line and extend the product lifespan. Effervescent tablets consist of high amounts of active pharmaceuticals and can be easily consumed in a single dosage, as opposed to multiple doses.

North America is the largest regional contributor to the effervescent products market as the continent has a number of factors in its favor. Effervescent tablets account for a lion's share of more than 70% of the North America effervescent products market by product form throughout the forecast period. Effervescent tablets represent a potential market opportunity of approx. US\$ 15.7 Bn in North America by the end of the study period making it well worth the while of major players in the effervescent products market.
