The goose egg briquette machine is a device that presses powdery materials (such as coal slime, mineral powder, etc.) into spherical particles. Its main working principle is to compress powdery materials that are difficult to form into spherical particles with a certain shape and strength through mechanical force for easy storage, transportation and subsequent use. The goose egg briquette machine is widely used in coal processing, metallurgy, chemical industry and other fields. In the coal processing industry, the goose egg briquette machine is mainly used to press materials such as coal slime into spherical briquettes to facilitate combustion and reduce environmental pollution. At the same time, the equipment can also be used to process other powdered materials, such as mineral powder, metallurgical waste, etc., to increase the added value and utilization rate of materials by making balls and blocks. The advantages of the goose egg briquette machine are its compact structure, easy operation, high production efficiency, and customized design according to different material characteristics and production requirements. In addition, with the continuous advancement of technology and the improvement of environmental protection requirements, the goose egg briquette machine has also been continuously improved in terms of environmental protection performance, which can better meet market demand and policy requirements.
