The e House is a prefabricated walk-in modular steel structure outdoor box, which can accommodate medium voltage and low-voltage switchgear and auxiliary equipment. It can be skid mounted or directly installed on the pallet truck, which can achieve short on-site installation, commissioning and start-up time. It is a high-quality and efficient alternative to the traditional on-site civil substation and electrical room (such as concrete, brick building, etc.). Close cooperation with major suppliers during design and manufacturing makes modification and integration more convenient. Its mobility makes installation and transfer easier and more economical. It can be installed near the main load, which can reduce the size and length of power and control cables, and reduce the energy loss.
