The global EIA Grade Horseradish Peroxidase market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

EIA grade horseradish peroxidase (HRP) is a high-purity form of the enzyme peroxidase derived from horseradish roots. It is specifically optimized for use in enzyme immunoassays (EIAs) and other biochemical assays requiring high sensitivity and low background interference. HRP catalyzes the conversion of substrates such as hydrogen peroxide and chromogens to produce detectable signals, typically colorimetric or chemiluminescent, which are proportional to the concentration of the target analyte. Its exceptional stability, purity, and enzymatic activity make EIA grade HRP a vital component in various diagnostic tests, research applications, and clinical assays for detecting antibodies, antigens, and other biomolecules.
