Revcovi (elapegademase-IvIr) is a new enzyme replacement therapy indicated for the treatment of adenosine deaminase severe combined immune deficiency (ADA-SCID) in pediatric and adult patients.

The market driver for Adenosine Deaminase Deficiency (ADA) therapeutic products is the critical need to address this rare and life-threatening genetic disorder. ADA-SCID severely compromises the immune system, making effective treatment essential. Gene therapies and enzyme replacement therapies have shown promise in restoring immune function, driving market growth. However, challenges include limited patient population, high treatment costs, and the need for early and accurate diagnosis. Additionally, access to these specialized therapies and regulatory hurdles pose challenges. Despite

challenges, the ADA therapeutic market presents opportunities for further research and development, offering hope for improved outcomes for patients with this devastating condition.
