Elastic multi wedge belts are used to drive accessory transmission components, but do not require tensioning wheels. Elastic multi wedge belt is used to drive accessory transmission components without the need for tensioning wheels. Its function is to drive generators, fans, water pumps, air conditioners, and power steering pumps. In 2025, global Elastic Wedge Belt production reached approximately 452 M Units, with an average global market price of around US\$ 3.8 per unit.

The elastic multi wedge belt market is mainly driven by the number of automobiles and the demand for after-sales replacement, with the characteristics of stable demand and weak periodicity. Under the trend of simplifying the vehicle system, it continues to improve its penetration rate by replacing traditional tensioning mechanisms. At the same time, material upgrades promote the development of products towards high durability and low noise, driving the industry to concentrate on the mid to high end; In the short term, it will continue to steadily grow supported by hybrid power and existing markets, but in the long run, the replacement of engine transmission systems by pure electric vehicles will have a certain degree of suppression on their demand.
