The global Elastic Polymer Microfluidic Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Elastic polymer microfluidic chips are chips that use elastic polymers as material substrates and construct fluid channels and reaction chambers at the micrometer scale through micro-nano processing technology. This chip allows precise manipulation of microfluids in micrometer-scale microtubes to perform various functions of traditional physical, chemical, or biological experiments on micrometer-scale chips. Because its material has good elasticity and processability, the chip design is more flexible and diverse, and can meet the needs of different experiments and applications. Elastic polymer microfluidic chips have a wide range of applications in biomedicine, chemical analysis, environmental monitoring and other fields. For example, in the biomedical field, chips can be used for cell culture, drug screening, disease diagnosis, etc.; in the field of chemical analysis, chips can be used for sample pretreatment, separation and purification, detection and analysis, etc.; in the field of environmental monitoring, chips can be used for water quality testing, air quality monitoring, etc.

Elastic polymer microfluidic chips are mainly made of polymer materials such as polydimethylsiloxane (PDMS), which have good elasticity and permeability and are widely used in the biomedical field. For example, PDMS chips can adapt to complex fluid channel designs and facilitate gas exchange during cell culture and biological reactions. Elastic polymer microfluidic chips have penetrated into many fields of scientific research and industrial applications, including optical and chemical analysis, environmental monitoring, food safety, and drug development. These chips achieve efficient chemical reactions, separations, and detections by precisely controlling the flow

and reaction process of fluids. In summary, the elastic polymer microfluidic chip market is in a rapid development stage, and its future development prospects are broad.
