Gel elastomers are highly viscoelastic polymer gels that have excellent shock absorption and damping characteristics. Typically, they are produced via a two-part casting system. Viscosity, hardness, tensile strength, processing temperature, cure time, and pot life are key properties to consider. Elastomer gels are widely used in personal care products such as sun care, skin care, hair care color cosmetics, and antiperspirants. Properties such as non-greasy, improved rheology, adhesion, transfer resistance, water repellency, and quick absorption, are significantly driving the product demand in the personal care market.
