The global Elastomer Sheeting market size is predicted to grow from US\$ 8620 million in 2025 to US\$ 12070 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Elastomer sheets are thin sheets made of elastomer materials. These materials have large deformation capacity and good recovery, that is, they can produce large deformation under the action of external force and quickly return to their original state after the external force is removed. Elastomer sheets can maintain stable performance in various environments and are not easy to age. Among them, thermoplastic elastomer sheets can be processed by heating, melting, extrusion molding and other processes, with high production efficiency.

United States market for Elastomer Sheeting is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
