Abstracts

According to this study, the global Elastomeric Closures market size will reach US\$ million by 2031.

Elastomeric closures are elastomeric materials that are compatible with the type of drug. It is thus used to close the drug.

The use of elastomeric materials, as well as various types of coatings, such as FluoroTec® and Teflon®, has become a promising alternative to traditional non-coated closures for primary packaging containers, which are prone to leaching and particle shedding. Contaminants. The advantages of using elastomeric materials in the manufacture of container closures are many, including low leaching potential, minimal chemical interaction with pharmacological formulations, and the fact that they can be used to make waterproof and hermetic closures. In addition, such closures can also be manufactured in a ready-to-use (RTU) format, saving significant time by eliminating the need for multiple steps throughout the filling/finishing process.
