The global Electric Actuator For Steam Turbine Valve market size is predicted to grow from US$ 145 million in 2025 to US$ 206 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Electric actuator for steam turbine valve is a device driven by electricity, used to automatically control the opening or adjustment of valves (such as steam inlet valve, exhaust valve, bypass valve, etc.) in the steam turbine system, to ensure the precise position control of the valve, and then to achieve the adjustment and stability of parameters such as steam flow, pressure, temperature, etc. Electric actuators are usually composed of electric motors, controllers, sensors and drive mechanisms, etc., and can be linked with automatic control systems (such as PLC, DCS) to achieve remote or automatic control, with the characteristics of high efficiency, precision and reliability.

Electric actuators for steam turbine valves are one of the indispensable key equipment in modern energy, chemical, electric power and other industries. With the continuous improvement of industrial automation level, electric actuators, as an important part of valve automatic control, have become the core technology for achieving efficient, precise and safe control in turbine systems. Currently, the global market demand for electric actuators is increasing year by year, especially in the fields of large-scale power, oil, gas and manufacturing.

At present, the market for electric actuators is mainly distributed in developed countries and emerging markets. In developed countries, especially in Europe and the United States, energy demand is stable and highly dependent on high-efficiency power generation facilities. The application of steam turbine electric actuators has become
