An electrical air pump is a device that pumps air using electrical energy. The pump uses an electric motor to rotate the impeller and draw air into the pump. The air is then pushed through the pump within the chamber. An air compressor is another device that turns power (gasoline or an electrical motor) into potential energy. This potential energy is stored in a tank and forces air into the tank creating positive pressure. Normally a hose is connected to the tank and then when opened with a valve or switch air is shot out of the hose at high speeds.
