The global Electric Anchor Windlass market size is predicted to grow from US\$ 115 million in 2025 to US\$ 158 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

An Electric Anchor Windlass is a mechanical device used on boats and ships to raise and lower the anchor via an electric motor. It consists of a gypsy wheel or chain wheel that engages the anchor chain or rope, allowing for controlled deployment and retrieval. Operated by an electric switch or remote control, the electric anchor windlass provides convenience and efficiency, reducing the physical effort required to handle heavy anchors and improving safety during anchoring operations. It is commonly used on recreational vessels, commercial ships, and various types of marine platforms, offering reliability and ease of use in anchoring procedures. A typical electric anchor windlass for 25-45 ft boats sells around US\$1.6k on average, with a plausible range of US\$1.2k-US\$2.7k depending on brand/power; global annual unit sales are roughly 70k.

Electric anchor windlasses are steadily moving from optional accessories to near-standard equipment on mid-size recreational and light commercial vessels, driven by rising expectations for convenience, safety, and solo-handling capability. Advances in compact motor design, corrosion-resistant composites, and intelligent control systems (e.g., wireless remotes, chain counters, auto-stop functions) are making units easier to install and more reliable in harsh saltwater environments. Growth is also being shaped by broader boating trends: expanding leisure craft ownership, aging demographics seeking labor-saving equipment, and charter fleets that prioritize user-friendly gear to reduce crew training and anchor-handling incidents. Looking forward, integration with vessel electronics, digital load monitoring, and hybridization with hydraulic systems are likely to differentiate next-generation products, while sustainability pressures may spur

designs emphasizing energy efficiency and recyclability. Overall, the category is evolving from simple anchor handling toward smarter, connected components in the marine systems ecosystem.
