The global Electric Anesthesia Surgical Pendant market size is predicted to grow from US\$ 82.96 million in 2025 to US\$ 109 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

The electric anesthesia pendant system is an integrated, electrically operated, lifting medical device suspended from the operating room ceiling, specifically designed for anesthesiology departments. Driven by a motor, it raises and lowers the tower and rotates the cantilever, integrating anesthesia machines, monitors, gas terminals, power outlets, and exhaust systems, providing anesthesiologists with convenient operating height and an unobstructed working space.

Upstream industries primarily include suppliers of core components such as medical gas terminals, electric lifting mechanisms, aluminum alloy profiles, electrical control systems, and precision bearings. Downstream industries encompass end-users in operating rooms, anesthesiology departments, and day surgery centers at all levels of hospitals, utilizing the system through medical equipment procurement bidding, cleanroom engineering support, and distributor distribution to provide anesthesia support for various surgical procedures. The global unit price of electric anesthesia medical pendants is US\$11,600, with annual sales of approximately 7,310 units and a global production capacity of 8,000 units. The industry profit margin is 18%.

The global electric anesthesia pendant system market is undergoing a profound transformation driven by both intelligent integration and user-friendly design. On the technical front, electric lifting has become the mainstream configuration, allowing anesthesiologists to precisely adjust the equipment height according to their operating habits, significantly improving surgical convenience and comfort. Products are rapidly

breaking through towards intelligent IoT, integrating equipment status self-diagnosis, remote monitoring, and intelligent emission of anesthetic waste gas, transforming the pendant from a simple load-bearing device into an intelligent anesthesia workstation in the operating room. Modular design is integrated throughout the R&D process, allowing hospitals to flexibly configure the number of gas terminals and instrument platform layers according to anesthesia needs, improving space utilization efficiency. In terms of application, the widespread adoption of day surgery and minimally invasive surgery is driving a surge in demand for electric anesthesia pendants, with the Asia-Pacific region showing the greatest growth potential due to expanded medical infrastructure investment and the construction of high-end surgical centers. In the future, electric anesthesia pendants will continue to evolve towards greater compactness, quieter operation, and greater intelligence.
