The global Electric Arc Wire Spray System market size is predicted to grow from US$ 840 million in 2025 to US$ 1111 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

Wire arc spray involves two consumable metal or alloy wires. When fed into the spray gun, the twin wires which are electrically charged with opposing polarity will create arc while contacting each other at the designated position in front of the gun. The heat of the arc melts the metal wires, and the melting material is atomized by compressed air into particles and sprayed onto the surface of a substrate. The two wires are fed into the arc spray gun simultaneously at a constant rate and by this way, arc spray can carry out large area of coating operations.

The Electric Arc Wire Spray System is an emerging technology in the coatings and protective coatings industry, witnessing an expanding market presence. This system experiences rapid sales growth and finds specific uses in surface coating applications, including corrosion protection, conductive coatings, and thermal barrier coatings. In the future, as industrial manufacturing and infrastructure development continue to grow, the Electric Arc Wire Spray System is poised for continued development, while also facing trends towards greater efficiency, environmental friendliness, and automation.
