The global Electric Bicycle Chain market size is predicted to grow from US\$ 239 million in 2025 to US\$ 324 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The electric bicycle chain is an important component of the electric bicycle transmission system, which connects the pedal crankshaft and the wheels, allowing the electric bicycle to move forward by manually stepping on the pedals like a bicycle even in a non electric state. The working principle of an electric bicycle chain is similar to that of a bicycle chain. When a person steps on the pedal, the pedal drives the chain to rotate through the crankshaft, and the chain then transmits power to the wheels, thereby driving the electric bicycle forward. The rotation of the chain is achieved through the connection and sliding between the links. When one end of the chain is subjected to a force, the force will be transmitted to each link along the chain, thereby driving the rotation of the entire chain.

United States market for Electric Bicycle Chain is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
