The global Electric Booster Station market size is predicted to grow from US$ 230 million in 2025 to US$ 285 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

Electric booster station is an important facility in power system, which is mainly used to boost the voltage of power generated by power plant through transformer, so as to facilitate long-distance efficient transmission. The boosting process reduces the current loss on the transmission line and improves the power transmission efficiency. This is because according to the principle of electrical engineering, when transmitting the same power of electrical energy, the higher the voltage, the smaller the current, thus reducing the resistance loss of the line.

United States market for Electric Booster Station is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Electric Booster Station is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
