The global Electric Cabinet Locker Lock market size is predicted to grow from US\$ 1076 million in 2025 to US\$ 1447 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

In 2025, global sales of Electric Cabinet Locker Lock reached approximately 50 million units, with an average market price of about USD 22 per unit, an annual production capacity of roughly 59 million units, and an industry-average gross margin of approximately 35%.

Electric Cabinet Locker Locks are electromechanical locking devices mounted on electrical control cabinets, distribution boards, racks, IT/server cabinets, and storage lockers. They use a solenoid or micro-motor to drive the latch, and are controlled by keypads, RFID/IC cards, Bluetooth, bus signals, or integrated access-control commands. Typical formats include electronic swing-handles for enclosures, motor-driven lock bodies, and compact wireless smart cabinet locks, providing access-control-grade security for server cabinets, employee lockers and other storage enclosures.

Upstream, the value chain is dominated by suppliers of zinc-alloy / stainless-steel cast and stamped parts, engineering plastics, miniature motors and solenoids, PCB control boards, and RFID / keypad modules, along with plating, coating and cable-assembly partners. Midstream manufacturers assemble, test and brand the complete locks, often supplying both own-brand and OEM products. Downstream demand comes mainly from electrical switchgear and control cabinets, telecom and data-center racks, industrial control boxes, smart lockers, and storage systems in commercial, education and public facilities. Each cabinet door typically uses one or two electric cabinet locks, so total

consumption is driven by new cabinet installations plus retrofit / replacement cycles, closely tracking the growth of electrical enclosures, server cabinets and smart-locker deployments.
