Electric descaling water treatment system is a device that prevents limescale buildup and rust in pipes and appliances by using electric impulses to modify the crystallization process of the liquid calcium. Unlike conventional water softeners, electric descalers do not use salt or chemicals to remove the calcium and magnesium minerals from the water. Instead, they make the hard limescale lose its adhesive power and wash away with the water as a fine powder. Electric descalers are also known as electronic water softeners, electronic water conditioners, or capacitive water descalers.
