The electric drive axle planetary gear is a transmission system component specifically used in electric vehicles. It efficiently transmits the power of the motor to the wheels, improving the performance and driving efficiency of the vehicle. Its basic structure consists of four parts: the sun gear, the planetary gear, the planetary carrier and the inner ring gear. The motor drives the sun gear to rotate through the input shaft, and the sun gear drives the planetary gears. These planetary gears rotate around the sun gear and mesh with the fixed inner ring gear at the same time, and finally transmit the power to the output shaft.

The global Electric Drive Axle Planetary Gear market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
