Abstracts

The global Electric-driven Liquid Supply Skid market size is predicted to grow from US$ 146 million in 2025 to US$ 474 million in 2032; it is expected to grow at a CAGR of 18.6% from 2026 to 2032.

In 2024, the global production of electrically driven liquid supply skids reached 1,309 units, with an average selling price of US$96,800 per unit, a gross profit margin of 35.68%, and an output of 60 units per unit. The Electric-driven Liquid Supply Skid features automatic liquid supply control, automatically adjusting the liquid supply pump's displacement based on user-defined ratios and variations in the discharge pump's displacement. This ground-based equipment utilizes electric drive technology, variable frequency drive transmission technology, and pressure closed-loop automatic control technology to achieve stepless adjustment and instantaneous response of the liquid supply pump. The Electric-driven Liquid Supply Skid employs variable frequency drive transmission technology to achieve instantaneous response and stepless speed adjustment of the liquid supply pump, resulting in a higher response rate and a wider speed adjustment range. Based on pressure closed-loop automatic control technology, it rapidly adjusts the liquid supply pump speed according to changes in the operating displacement, ensuring stable liquid supply. It effectively reduces noise during operation, achieving zero emissions of air pollutants. It supports manual, automatic, and remote three-level control modes to meet the needs of different application scenarios. It is suitable for fracturing operations requiring precise control of liquid supply volume and pressure.

United States market for Electric-driven Liquid Supply Skid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
