Electric duct air heater is a device that uses electrical energy to heat air. It typically consists of heating elements, fins, a fan, and a control system. During operation, the heating elements generate heat and transfer it to the air passing through the duct via the fins. At the same time, the fan draws cold air into the duct and pushes the heated air towards the space that requires heating. This heater offers advantages such as fast heating speeds, controllable temperatures, and easy installation. It is widely used in industrial, commercial, and residential applications to provide comfortable indoor temperatures and meet specific process heating requirements.
