The global Electric Energy Automatic Metering System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The electric energy metering automation system is the most commonly used marketing system in the marketing strategy of today's electric power companies. The automation system is an extremely important part of electric power marketing. The electric energy metering automation system mainly consists of communication channels, metering automation terminals, and metering automation during operation. Station and other systems are composed together. The metering automation system can control, collect, and analyze information related to the operation of the power system, and can also conduct all-round supervision and control of the operation of the metering automation system. The electric energy measurement automation system also has functions such as monitoring, measurement management, and collection. The operation of the system can better serve pre-purchased electricity, load control, market management, etc. The metering automation main station system and metering automation terminal can transmit information through information channels, thereby ensuring the perfection and efficiency of information transmission. The structure of the information channel is extremely complex and cumbersome, but it can maximize efficiency. The metering automation terminal is mainly responsible for collecting comprehensive information content. It can also collect more power data information and conduct comprehensive management of information. The information channel can issue instructions to the main station system and then send its information content to other departments.

Nowadays, my country's electric power enterprises are developing rapidly, and the socio-economic level and technology are also developing rapidly. People's quality of life

and living standards are also improving year by year. People's demand and stability for electric energy in life and work are also increasing year by year. In the process of development of my country's electric power enterprises, enterprises should focus on load control, remote meter reading, electricity bill settlement and other related work, so as to ensure the economic benefits of the enterprise and the sustainable development and construction in the future. The electric energy metering automation system is gradually applied in the market management of electric power marketing. The application of the system fully reflects the modern technology and level, and can better protect the economic benefits of electric power enterprises.
