Electric flow control ball valves use motors to rotate a ball with a hole in the center to control flow. When the hole is in line with the flow, the valve is fully open, and when it is turned perpendicular to the flow, it is closed. Most electric ball valves don't require power to hold position like solenoid valves. Some electric actuated ball valves can be opened or closed manually. Ball valves work well in situations that involve large volumes of flow. Electric flow control ball valves allow liquid, gas, or air through electric controls. Some have several valves to manage large systems.

The global market for Electric Flow Control Ball Valves is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Electric Flow Control Ball Valves market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
