The global Electric Fracturing Pump Skid market size is predicted to grow from US$ 879 million in 2025 to US$ 2849 million in 2032; it is expected to grow at a CAGR of 18.6% from 2026 to 2032.

In 2024, the global production of Electric Fracturing Pump Skids reached 7,855 units, with an average selling price of US$97,000 per unit, a gross profit margin of 35.68%, and an average production of 60 units per unit. Upstream core components include motors, plunger pumps. The electric fracturing pump skid is an integrated fracturing equipment. Its core is a variable frequency motor driven by industrial grid power or gas-fired power generation, which in turn drives an electric fracturing pump to achieve stepless speed regulation, completing the high-pressure hydraulic injection into the formation to create fractures. The electric fracturing pump skid uses a skid-mounted structure as its carrier, integrating the electric fracturing pump, variable frequency control system, intelligent monitoring module, and auxiliary equipment (such as sand mixing devices and fluid supply systems) onto a single platform. Through modular design, it can be expanded into a complete electric fracturing system, covering the entire process from fluid supply and sand mixing to pumping.

United States market for Electric Fracturing Pump Skid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
