Abstracts

The global Electric Frothers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Electric frothers, also known as milk frothers or milk frothing machines, are popular kitchen appliances used for creating frothy milk for beverages like coffee, lattes, cappuccinos, and hot chocolate.

Milk Alternatives: With the growing popularity of plant-based milk alternatives (e.g., almond milk, oat milk, soy milk), electric frothers were being designed to effectively froth these dairy-free options. Manufacturers were focusing on creating frothers capable of handling a variety of milk types.

Advanced Frothing Technology: Manufacturers were incorporating advanced frothing technology into electric frothers. This included different frothing modes, such as hot or cold frothing, and the ability to create different foam textures, from microfoam for lattes to thick foam for cappuccinos.

Built-in Heating: Many electric frothers were equipped with heating elements, allowing users to heat and froth milk in a single machine. This made the frothing process more convenient and efficient.
