An Electric Garment Steamer is a household or commercial appliance that uses electrically heated water to generate steam for removing wrinkles and refreshing garments and fabrics. It typically consists of a water tank, heating element, steam chamber, nozzle, control system, and supporting structure. Steam is released through the nozzle and penetrates fabric fibers, allowing wrinkles to relax without direct contact with a heated soleplate. Products include handheld, upright, and portable configurations, with differences in steam output, heating speed, tank capacity, operating time, and temperature control. They are widely used for clothing care in homes, hotels, garment stores, and commercial laundry environments.

The upstream industry supplies plastics, heating elements, pumps, water tanks, hoses, steam nozzles, electronic controls, power components, and packaging materials. The midstream industry performs injection molding, heating-system assembly, electrical integration, steam-path assembly, product testing, and final packaging. Products are
