The global Electric Gas Boosters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electric gas booster is a device used to increase the pressure of natural gas or other gases in pipelines or storage tanks. They pressurize the gas by using an electric motor to drive the compressor. Electric gas boosters are commonly used in gas delivery and distribution systems, as well as industrial processes that require high-pressure gas. They are usually used in applications where natural gas pressure is too low to meet system requirements or requires long-distance transportation of natural gas. Electric gas boosters can be designed to handle various gas flow rates and pressures, depending on the specific requirements of the application. They are typically used in conjunction with other gas processing equipment, such as filters, regulators, and control valves.
