The Electric Handpieces is an instrument that uses electricity to generate a rotary cutting motion, similar to how a drill operates. Often, handpieces are organized by speed range (high speed or low speed) which determines the applications that are suitable. Typical high speed applications include cutting tooth structure and finishing restorations while low speed handpieces have a range of applications including endodontics, implantology, caries removal and prophylaxis. Electric handpieces offer the advantage of more torque, which can translate to smooth, consistent cutting ability across a wide range of speeds.

This report mainly covers the High-Speed Electric Handpieces and Low-Speed Electric Handpieces product type.

Danaher, Dentsply Sirona, NSK, W&H, Bien Air and Morita are the leading manufacturers of electric heads, with the top 3 accounting for approximately 45% of the total market.

Europe is the leading production region, accounting for about 50% of the total. North America is next, at about 15%.
