Electric hi-torque nutrunner is a type of power tool used for tightening nuts and bolts. It is designed to deliver high levels of torque, which is a measure of rotational force, and is often used in industrial and manufacturing settings where large and heavy equipment is assembled. Unlike traditional wrenches or ratchets, which rely on manual force to tighten nuts and bolts, a hi-torque nutrunner uses an electric motor to rotate a socket or drive that is fitted over the nut or bolt. This allows for faster and more consistent

tightening, as well as greater precision and control.
