The global Electric Hydraulic Disc Brake market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electric hydraulic disc brake is a device that realizes the braking function of vehicles or mechanical equipment through hydraulic transmission. It usually involves contact friction between one or more friction plates (i.e. brake pads) and a rotating part (usually a wheel or mechanical part) to achieve braking purposes. The working principle of electro-hydraulic disc brake is to drive the hydraulic cylinder through electricity or pressure device during braking operation, so that the liquid in the hydraulic cylinder is pressurized and transferred to the friction plate, so that it comes into contact with the rotating parts and generates friction, thereby preventing Movement of rotating parts. This type of brake is usually applied to vehicles (such as trucks, trailers, heavy machinery, etc.) or equipment that require large braking force and stability to ensure safe and reliable braking effects.

United States market for Electric Hydraulic Disc Brake is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
