The global Electric Hydraulic Pumps market size is predicted to grow from US\$ 9701 million in 2025 to US\$ 16110 million in 2031; it is expected to grow at a CAGR of 8.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

An electric hydraulic pump is a device that converts electricity into hydraulic energy. Its function is to convert the mechanical energy of power machines (such as electric motors and internal combustion engines) into pressure energy of liquid. The working principle of the hydraulic pump is based on the change of sealing volume. Through the change of sealing volume, the liquid generates pressure. According to the structure, hydraulic pumps can be divided into gear pumps, vane pumps, plunger pumps, screw pumps, etc.; according to the flow rate, they can be divided into small flow pumps, medium flow pumps, and large flow pumps; according to the transmission medium, they can be divided into oil pumps and mud pumps, etc.

As the energy crisis continues to intensify, the efficiency and energy saving of electric hydraulic pumps have become the focus of enterprises. Enterprises will pay more attention to the use of high-efficiency motors and energy-saving technologies to improve the energy efficiency ratio and power density of electric hydraulic pumps, reduce energy consumption and emissions, and meet environmental protection requirements.
